#### 3.2 PERMITTED RANGE OF OPERATING FREQUENCIES

#### 3.2.1 LIMITS OF PERMITTED RANGE OF OPERATING FREQUENCIES

The width of the power envelope is  $f_H - f_L$  for a give operating frequency. In equipment that allow adjustment or selection of different frequencies, the power envelope take up different positions in the allowed band. The frequency range is determined by the lowest value of fL and the highest value of fH resulting from the adjustment of the equipment to the lowest and highest operating frequency.

CONDITION	LIMIT	
	F <sub>L</sub> >5725.0MHz	
Under all test conditions	F <sub>H</sub> < 5875.0MHz	

#### 3.2.2 TEST PROCEDURES

Refer to chapter 4.2.3.3 of EN 300 440 V2.2.1 (2018-07).

#### 3.2.3 DEVIATION FROM TEST STANDARD

No deviation.

#### 3.2.4 TEST SETUP

The EUT and probe antenna were placed into the temperature oven. The probe has to be connected with spectrum analyzer. The power source of the EUT has to be connected with the power supply for voltage change. The frequency has to be recorded for the right and left end above threshold of highest and lowest channel respectively.
